

Did you know that **YOU** can help
SCN2A & SCN8A RIGHT NOW?

Start tracking your
daily seizures and
medications
with Amma,
a free specialized
mobile app

Why is this important?

There is still a lot about SCN2A and SCN8A that researchers don't know.

We learned so much from the Helpilepsy Study from 27 families on seizure patterns, but need more detailed data

Your participation will help better understand SCN8A and SCN2A right now.

This also means that you can help advance treatments today!

How would this help me?

The app helps us understand the connections between your child's medications, seizures and developmental progress with features such as:

Daily seizure tracking

Scheduled medication reminder

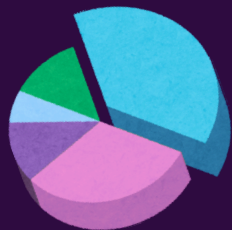

Entry into prospective study to help scientists understand SCN&A better

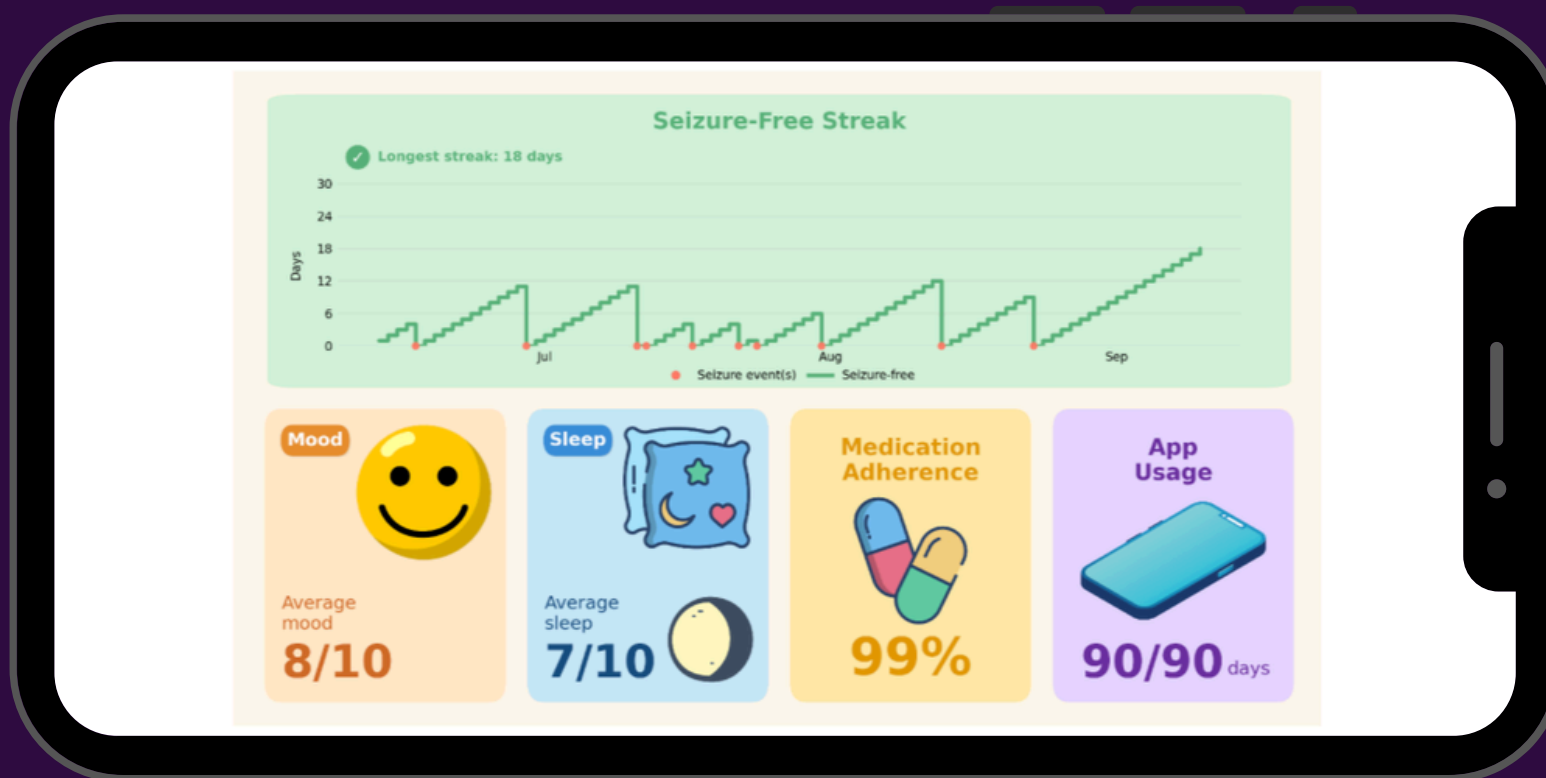

Multiple caregivers can log seizure and medications

You can also sign up to receive

**personalized
infographics**

on your child's progress.

How can I get involved?

1. Email info@scn8a.net to let us know your interest in the study

2. A link to download the Amma app will be sent to you

3. We will DM you via the app to accept you into the study

How to Use the App:

1. Open the Amma app

2. Log any medications taken

3. Record any seizures

4. (optional) Note any special symptoms

5. Confirm "no seizures" if the day was seizure-free

Questions?

The Shay Hammer Research Foundation team is helping SCN2A families get started with the Amma App.

Email info@scn8a.net with any questions.

*This project was approved by the
University of Arizona Human Subjects Committee.*
