

The Summer Seminar is where SCN2A families & professionals can come together to learn about SCN2A-related topics.

"Having the opportunity to network directly with the researchers who are working on a cure for your child in a casual and safe environment is an experience that completely changes your life and refills your cup of HOPE."

It's been 3 years since our last in-person conference and we have missed you!! This seminar will be a family-focused gathering where we can come together to learn about SCN2A-related topics and the latest progress in treatments, participate in research opportunities, and spend some time with others who share our experiences.

Financial assistance for travel is available through the Scholarship Application.

Scholarship Application

SUMMER SEMINAR TALKS

RESEARCH:

- Effects of Loss and Rescue of SCN2A in Mouse - Kevin Bender, PhD (UCSF)
- tRNA Approach to Rescuing SCN2A - Chris Ahern, PhD (University of Iowa)
